

EXECUTIVE PORTFOLIO

Andre C.

Business Intelligence • Enterprise AI • Enterprise Architecture

Business and technology executive building the operating systems behind data-driven organizations — executive dashboards, BI architecture, and AI-enabled decision support.

Los Angeles, CA • GitHub: github.com/tech49it • Technical & Executive Portfolio

An executive who builds business operating systems

Senior business and technology executive leading digital transformation, enterprise systems, business intelligence, and AI initiatives that sharpen executive decision-making and lift operational and revenue performance across North and South America and Europe.

Founder & Solution Architect of Atrium — a multi-tenant cloud platform unifying BI, executive reporting, AI automation, customer experience, and operational analytics into one operating system. Architects the full BI ecosystem, from source systems through executive dashboards, rather than reporting inside any single tool.

15+

Operational modules designed

100+

Cloud functions & API workflows

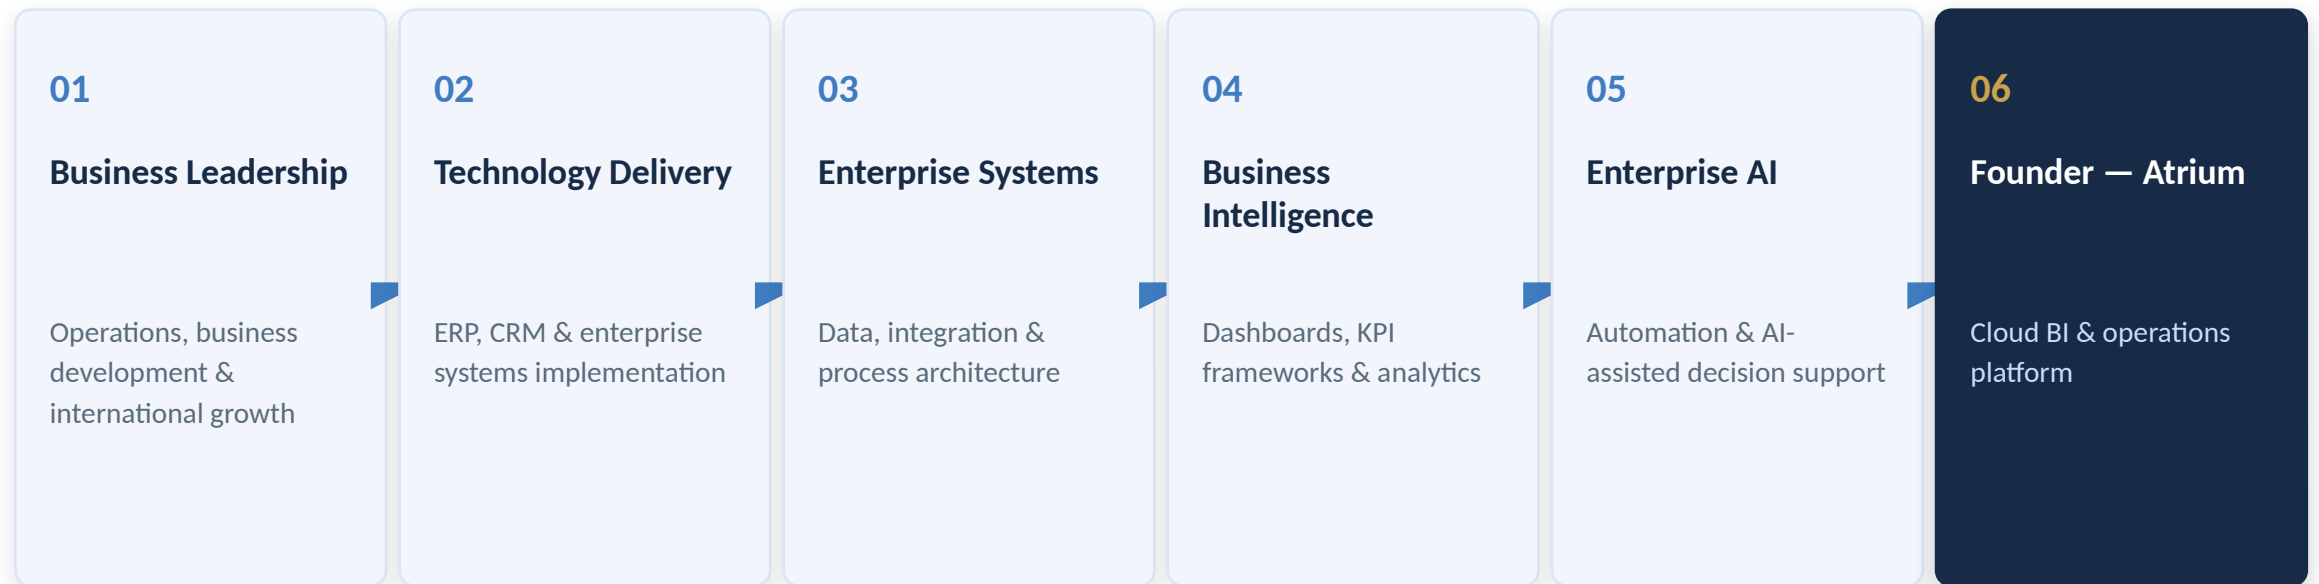

8

Executive dashboard domains

Multi-tenant

SaaS architecture with RBAC

A 30-year arc from business to platform leadership

Each stage compounds into the next — operations taught the questions, technology built the answers, and BI + AI turned them into executive systems.

How I build data-driven organizations

Decisions, not dashboards

Every metric earns its place by changing a decision. BI exists to move the business, not to decorate it.

Architect the whole stack

Own the ecosystem end to end — source systems, data models, governance, and the executive layer on top.

Translate across functions

Bridge finance, operations, sales, and engineering so one source of truth serves the whole leadership team.

Automate the routine

Let AI and workflow automation absorb the repetitive work so people focus on judgment and strategy.

Capabilities across the full BI ecosystem

Business Intelligence

Executive dashboard design • KPI frameworks • reporting architecture • Power BI • Tableau • Looker

Data Engineering

SQL • data modeling • data warehousing • ETL • BigQuery • star-schema design

Cloud & Security

Google Cloud (GCP) • cloud architecture • multi-tenant SaaS • REST APIs • data governance • RBAC

Enterprise Platforms

Firebase • Firestore • SAP R/3 • CRM • ERP • business process analysis

Artificial Intelligence

AI workflow automation • executive reporting automation • prompt engineering • process automation

Systems Integration

API-driven integration • PMS / accounting / CRM connectors • notification & reporting engines

Atrium™ — Enterprise BI & Operations Platform

A cloud-native operating system that integrates workforce management, operational intelligence, AI, executive reporting, and customer experience into a single multi-tenant platform for hospitality and residential operations.

01

Workforce Management

07

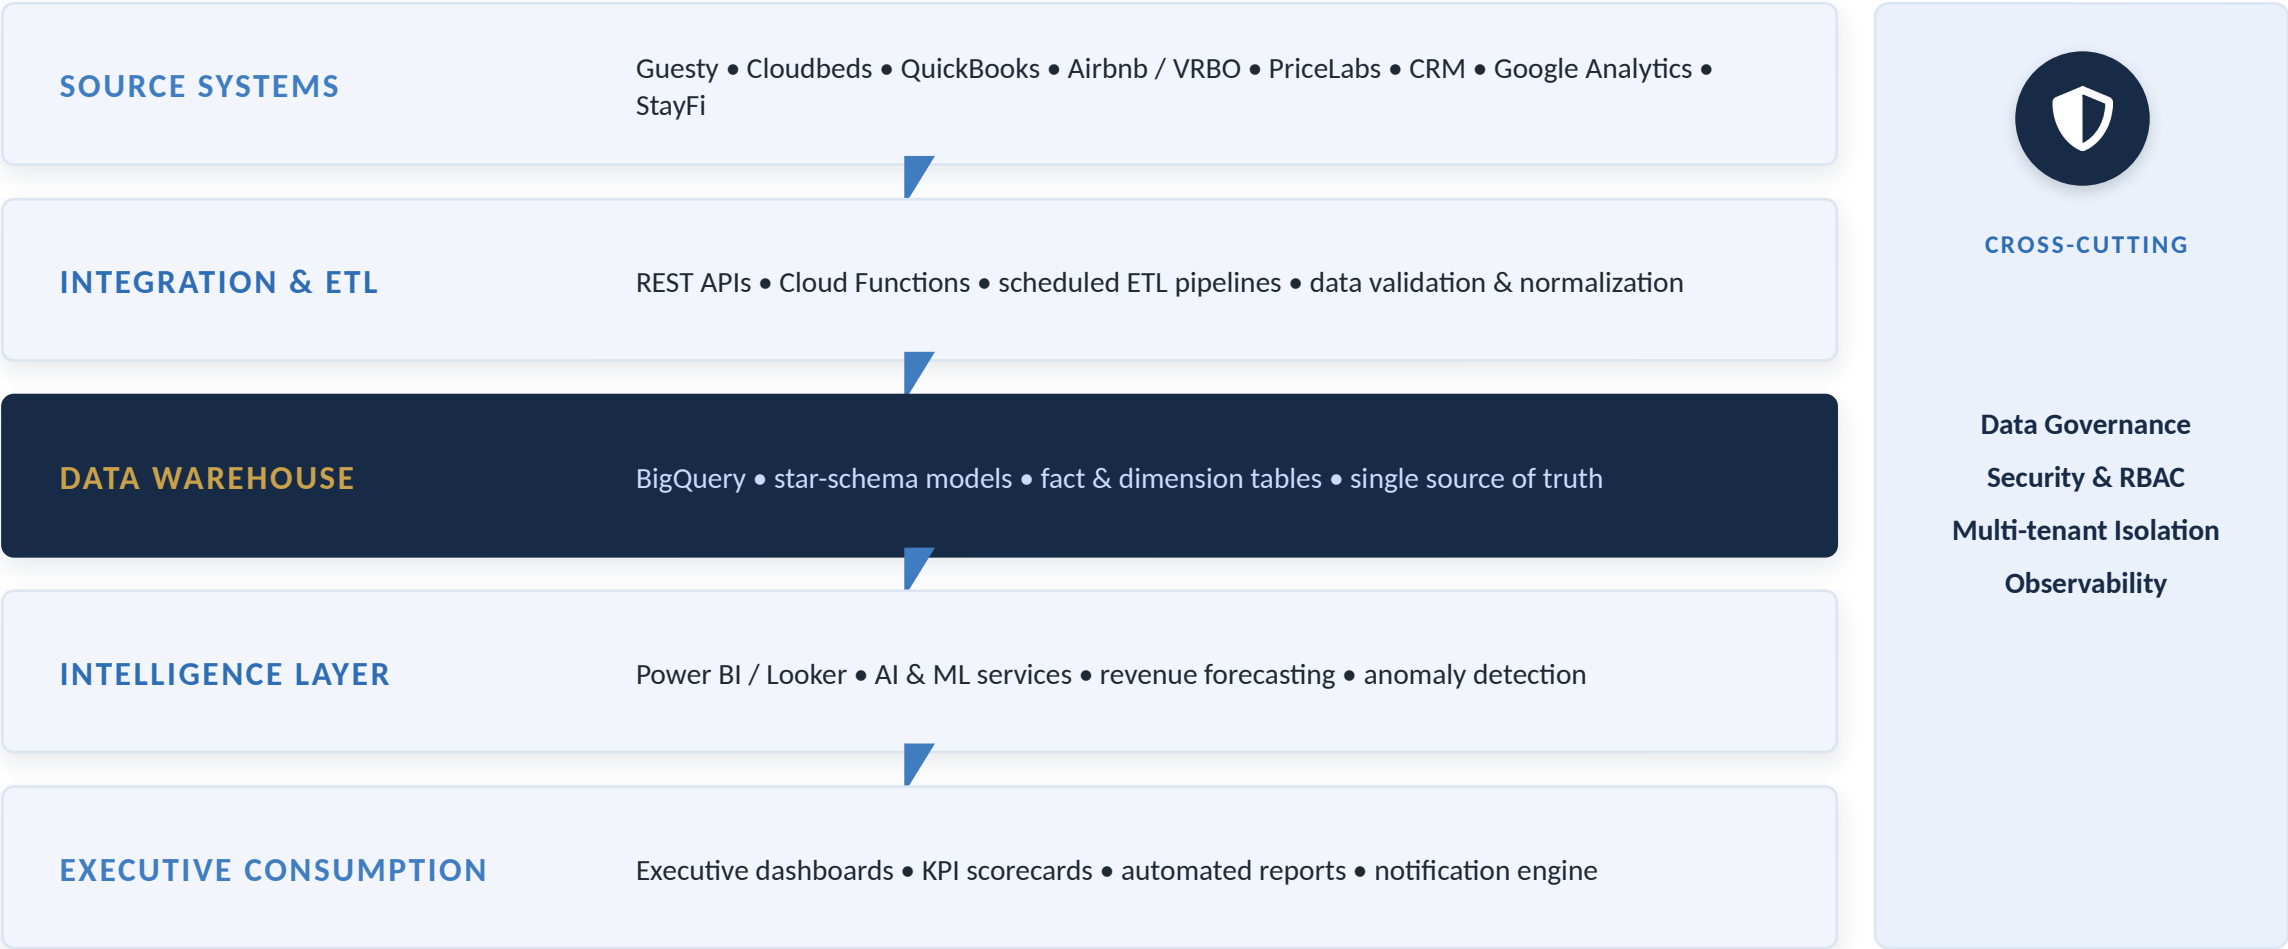

Analytics & Forecasting

08

AI Workflow Automation

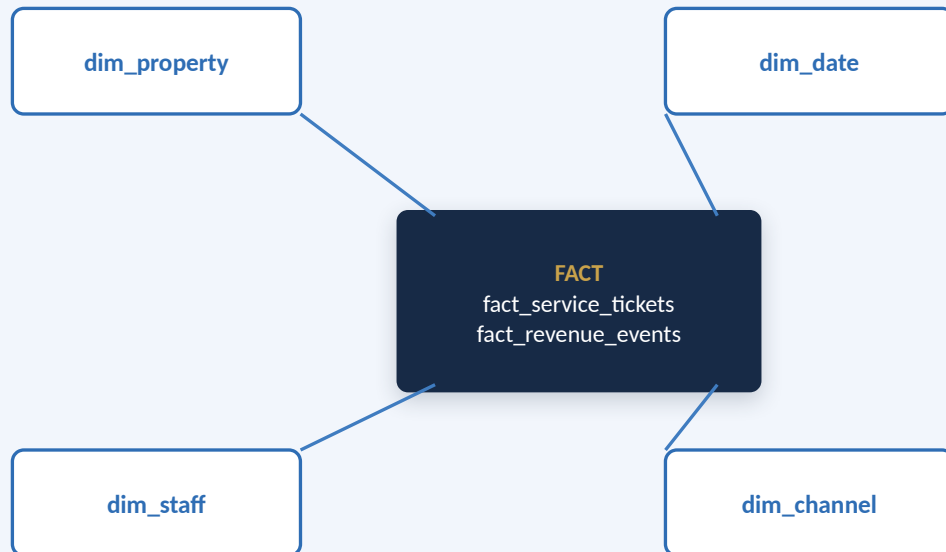

15+ modules • 100+ cloud functions • Firebase / Firestore / Cloud Functions • role-based access control

Source-to-decision data architecture

Warehouse model & a governed KPI framework

Star Schema — Single Source of Truth

T1

Tier 1 — Executive

Revenue, RevPAR, NOI margin, occupancy, CSAT — board-level outcomes reviewed weekly.

T2

Tier 2 — Operational

SLA compliance, resolution time, workforce productivity — managed daily by function leads.

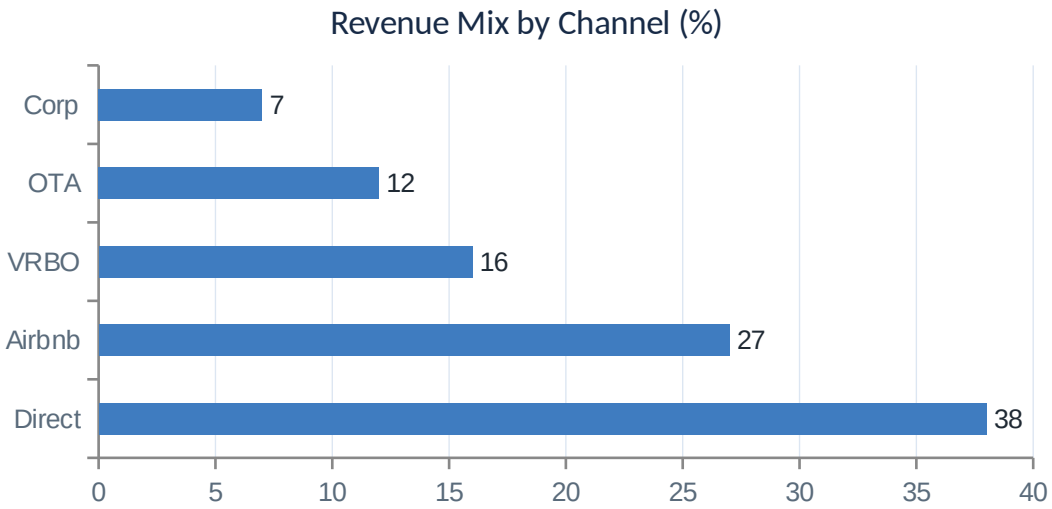

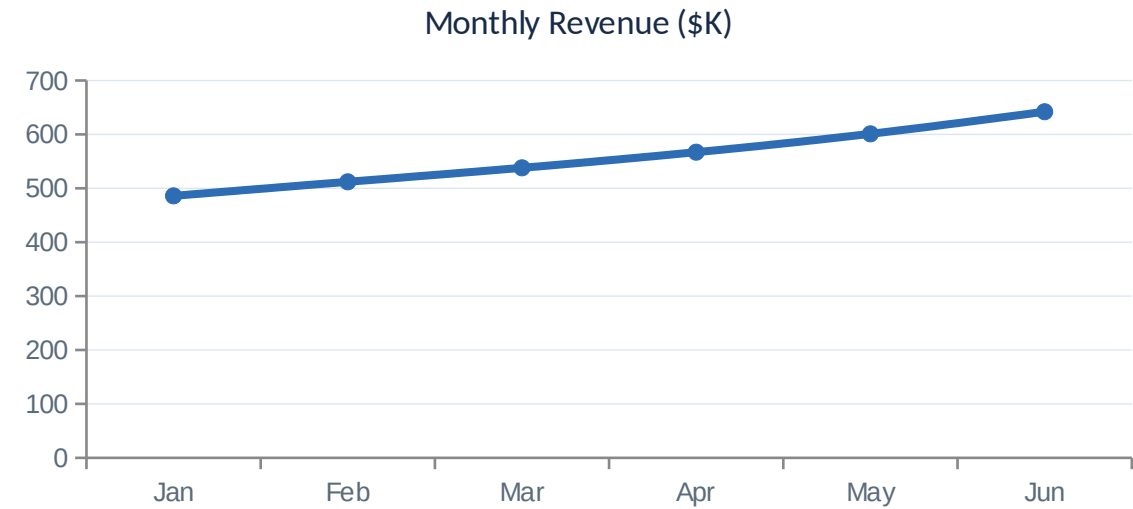

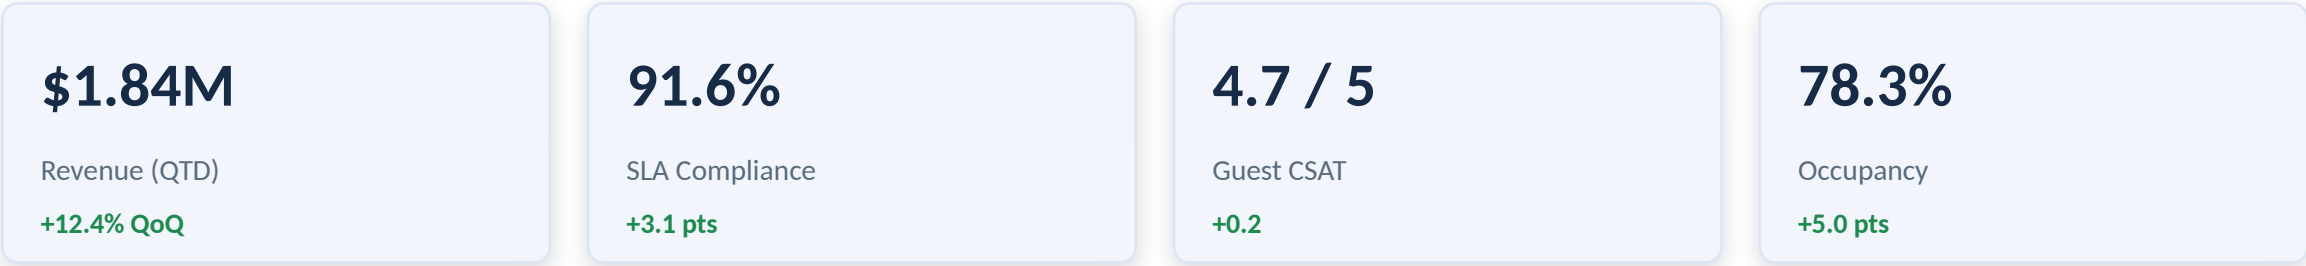

T3

Tier 3 — Diagnostic

Channel mix, vendor performance, anomaly flags — drill-downs that explain the movement.

A unified executive view

ILLUSTRATIVE — sample data for design demonstration

Where AI earns its place in the platform

Revenue Forecasting

Time-series models project revenue and occupancy to guide pricing and staffing.

Owner Churn Prediction

Risk scoring flags accounts likely to disengage so teams intervene early.

Lead Scoring

Inbound leads ranked by conversion likelihood to focus business development.

Guest Sentiment

NLP on reviews and feedback surfaces emerging service issues by property.

Automated Exec Summaries

AI drafts weekly executive reports from warehouse data, ready for review.

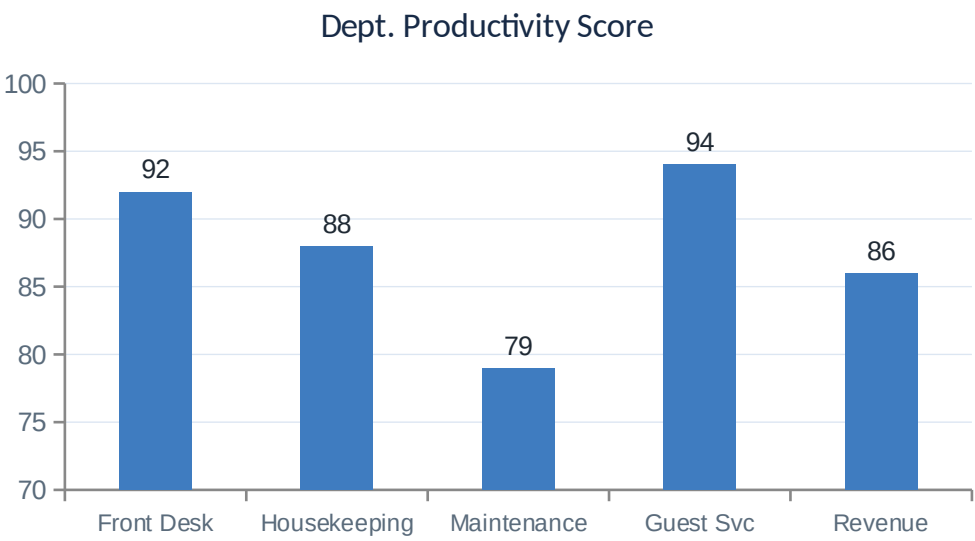

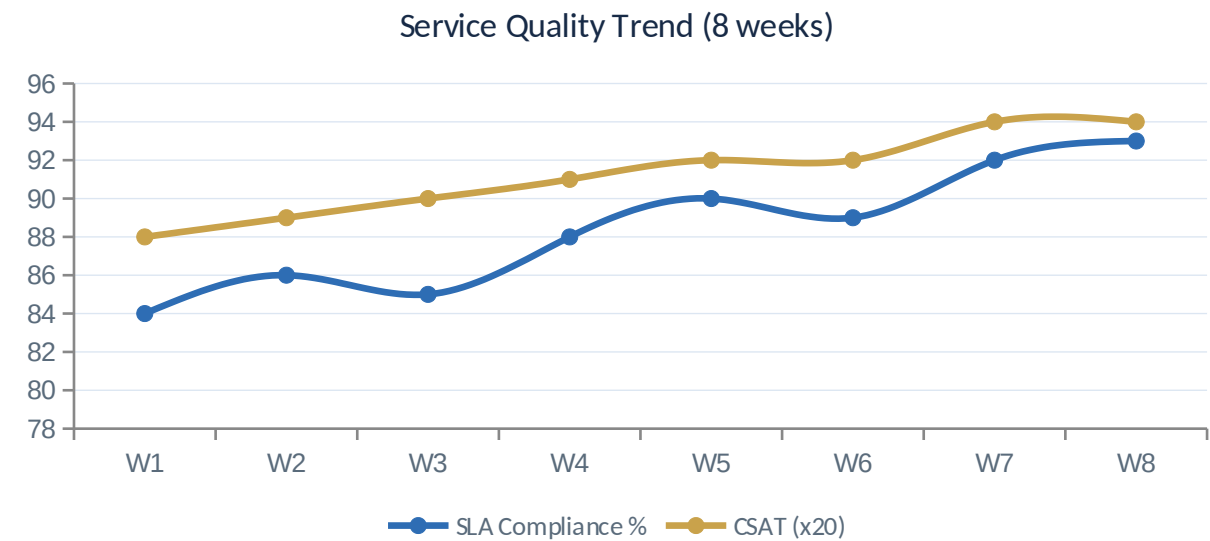

Operational Recommendations

Workflow automation routes tasks and recommends next-best actions.

Operational performance, made visible

ILLUSTRATIVE — sample data for design demonstration

WoW deltas

Week-over-week movement on every operational KPI

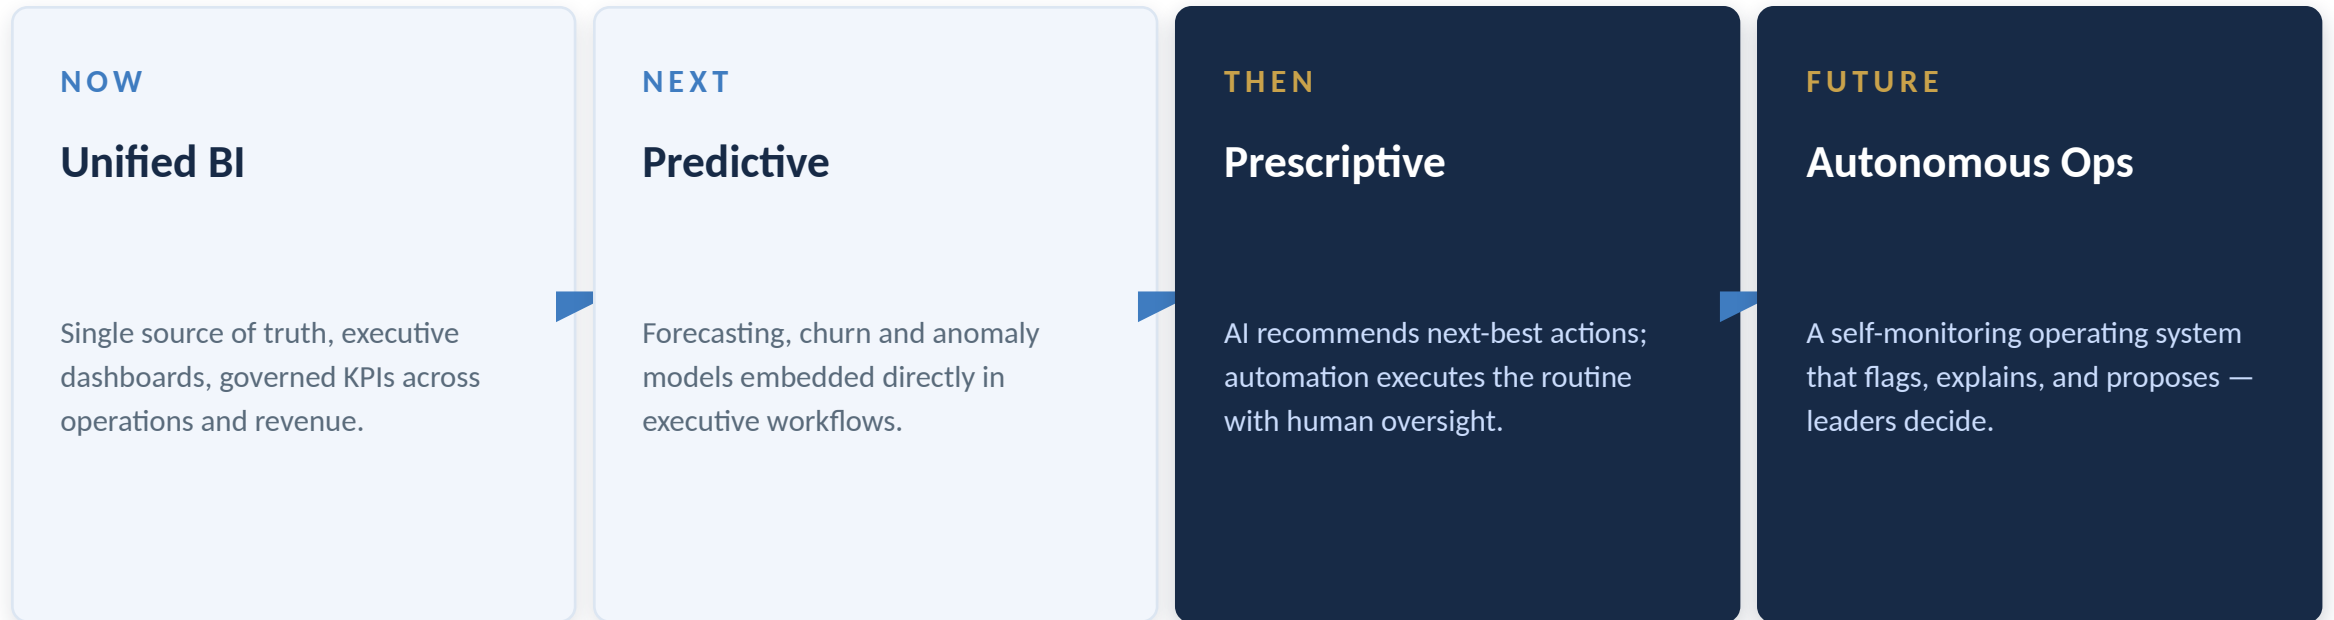

Rolling averages

4-week smoothing to separate signal from noise

Composite scoring

Department scorecards with letter grades & ranking

From reporting to an autonomous decision layer

The trajectory hiring managers want to see: BI that stops describing the past and starts driving the next decision.

LET'S BUILD THE DECISION LAYER
